

2.4.3 Editing Captions in Streams

This tutorial covers how to edit captions in Streams. When you record on Teams, make sure you put captioning on (shown in the previous recording on teams tutorial). If you don't, its okay, Streams will auto generate captions for you—it just will take some time to appear.

STEP 1

From your **My Content** section. Navigate to your desired video. Select the title to open it.

STEP 2

On the right side, you will see a transcript. If it is not there yet, wait a little longer for Streams to generate its captions. Select the **Pencil** to edit the captions. You can now change your captions.
