

2.6 Creating Downloadable Content from Streams

This tutorial covers how to create downloadable videos for students from Streams. This is a great option for students with poor internet. To create downloadable content from Streams, you must download the video off Streams then upload the file to Avenue.

NOTE: Follow up this tutorial with **Tutorial 2.6.1**.

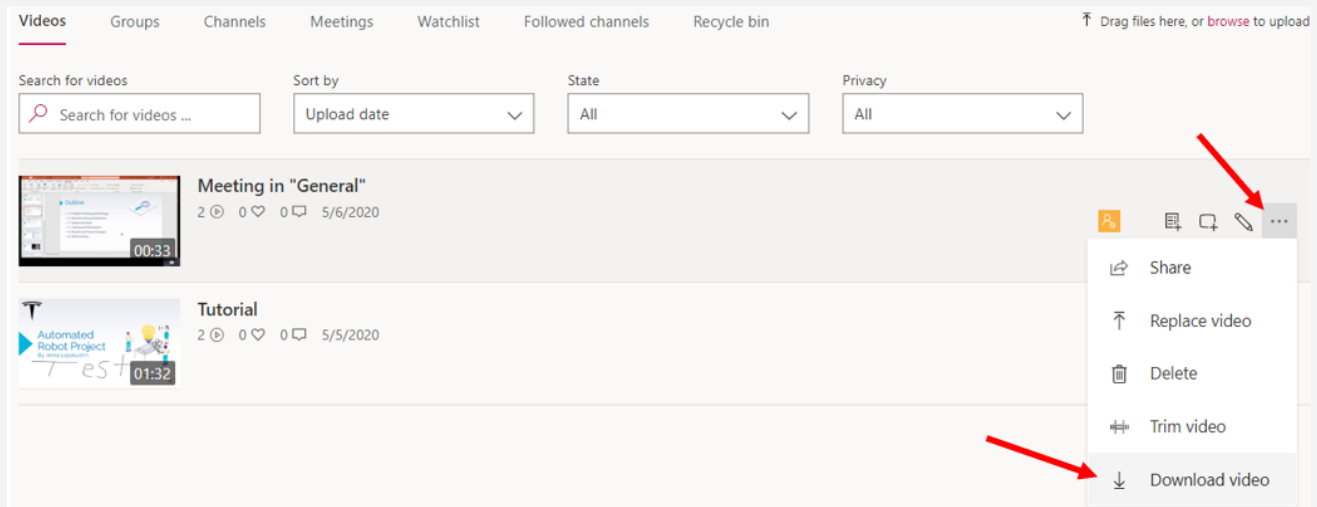

STEP 1

Open Microsoft Streams, select **My Content** then **Videos** to see your content.

STEP 2

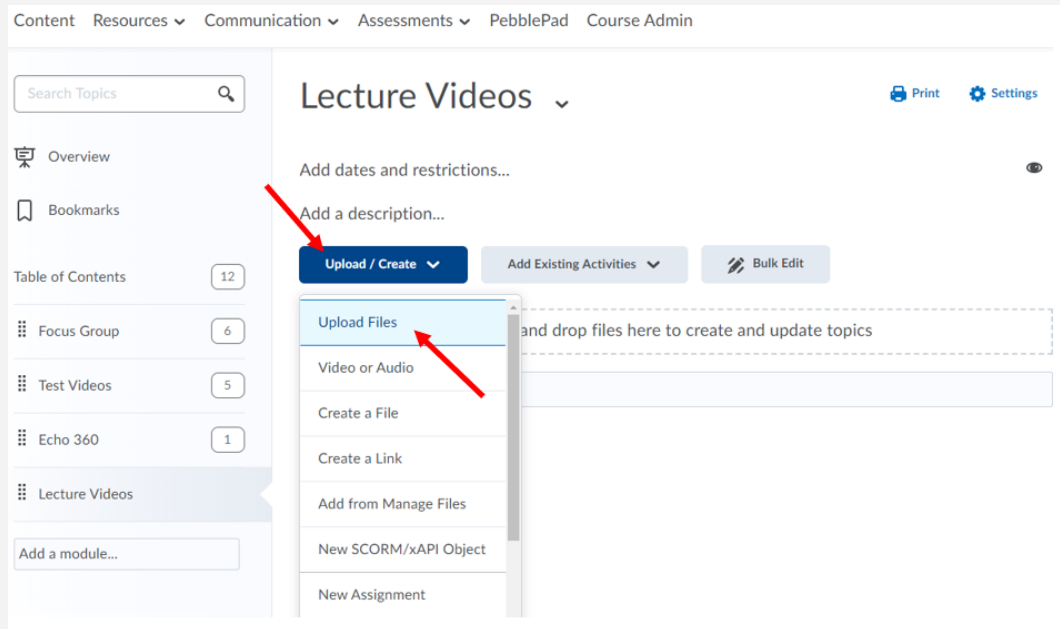

Choose your video, select the **Three Dots** then **Download**.

2.6 Creating Downloadable Content from Streams

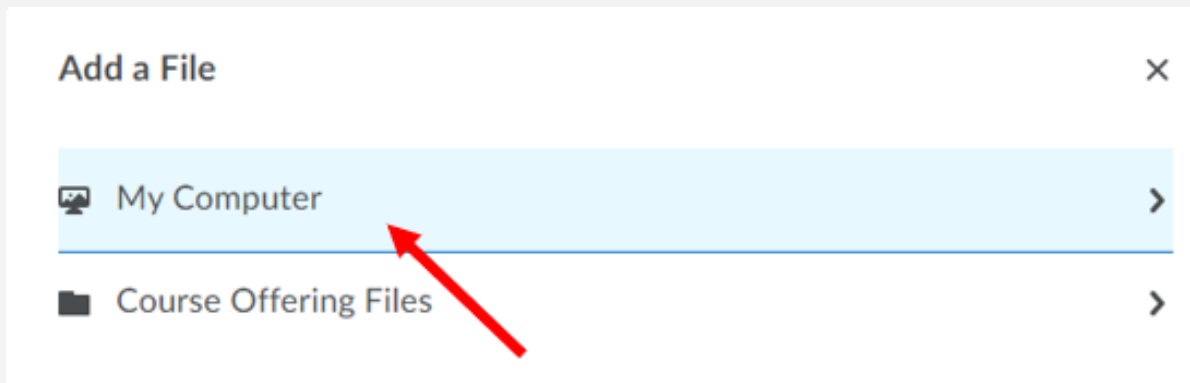

STEP 3

Open Avenue and navigate to the module you wish to upload into. Select **Upload/Create** then **Upload Files**.

STEP 4

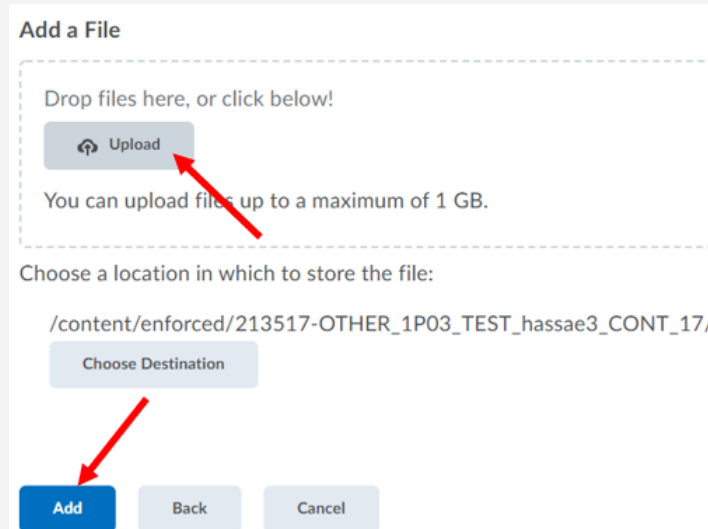

Select **My Computer**.

STEP 5

Select **Upload**, select the file you wish to upload. Select **Add** when done.

STEP 6

If necessary, rename the video to the appropriate name. The student will see the following screen and will be able to download.
