

3.4.4 Trimming Videos in Launch Editor

This tutorial covers Launch Editor, MacVideo's built in video editing software. It assumes you understand how to access editing features using **Tutorial 3.4**. Trimming videos can be helpful if you have lull periods in your recording.

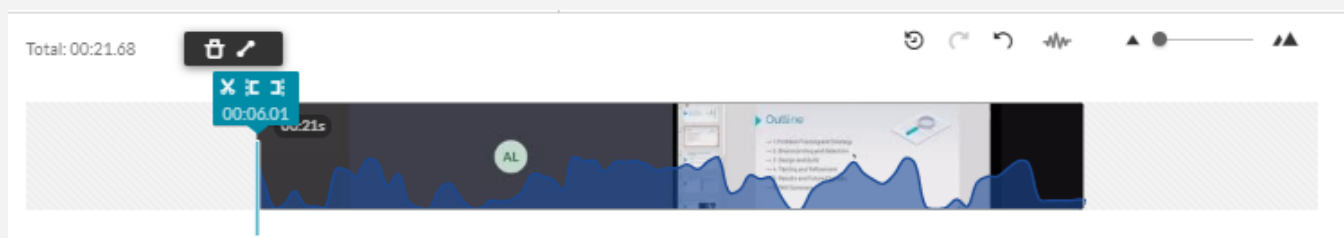

STEP 1

Open your video, access the settings by selecting **Actions** → **Launch Editor**. From the Launch **Editor** feature, navigate to the correct tab as shown. To trim your video, move the yellow rectangles.

STEP 2

For example, I have moved the yellow pieces to trim away the beginning and end of my video. The gray sections are parts of my video that will be cut.

3.4.4 Trimming Videos in Launch Editor

STEP 3

Click on **Save** if you want to overwrite your original video, or **Save a Copy** if you would like to create a new separate video with your edits.
